Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Application No. Applicant(s) 10/724.812 OKADA, TSUTOMU Office Action Summary Art Unit Examiner DIANE YABUT 3734 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 21 April 2008. 2a) ☐ This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-11.13-15 and 17 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) _____ is/are allowed. 6) Claim(s) 1-11,13-15 and 17 is/are rejected. 7) Claim(s) _____ is/are objected to. 8) Claim(s) _____ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/21/2008 has been entered.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-10, 13-15, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishikawa (U.S. Patent No. 6,306,081) in view of Chu (U.S. Patent No. 5,968,056).
- Claims 1, 3-6, 9-10, and 13-15: Ishikawa discloses a snare wire having a loop portion 17 at a distal end portion of the snare wire, a substantially cylindrical cap 10 including a cylindrical wall, and a holding mechanism ("anchor") configured to hold the loop portion of the snare wire in an inner or inwardly protruding portion 19 of the cylindrical wall such

Application/Control Number: 10/724,812

Art Unit: 3731

that all portions of the loop portion are held interior of the cylindrical wall and the loop may be disengaged from the holding mechanism in a radially inward direction, and an attachment portion 3 which attaches the cap to an end portion of an endoscope 2. The cap is elastic (Figures 5-6).

Ishikawa does not disclose the holding mechanism having a plurality of engagement pieces and a plurality of corresponding portions which hold the distal end portion of the snare wire between the engagement piece and the corresponding portion.

Chu teaches holding mechanism for a snare wire 70 that has a plurality of engagement pieces (adjacent to 90, 68a-c, 68a'-c') and a plurality of corresponding portions (in between 68a-c and 90, and 90 and 68a'-c') which hold the distal end portion of the snare wire between the engagement piece and the corresponding portion, said plurality of engagement pieces and being respectively distanced from each other in a circumferential direction of the circular end portion, and each of the engagement pieces is sectioned from the corresponding portion by a pair of vertical notches 90, 68a-c, 68a'-c' which are distanced at the circular end portion in the circumferential direction and formed at a substantially right angle with the circumferential direction in that they possess a width (Figures 1 and 4). See annotated Figure 1 below.

Chu also discloses the plurality of engagement pieces (adjacent 68a-c and 90, and 90 and 68a'-c') being arranged in the same interval in the circumferential direction and each of the engagement pieces and each of the corresponding portions (in between 68a-c and 90, and 90 and 68a'-c') directly contacting opposite sides of the end portion of the snare wire to hold the end portion therebetween (Figure 1).

Page 4

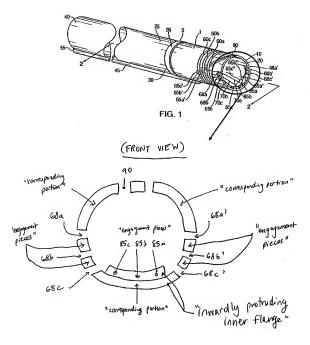

Application/Control Number: 10/724,812

Art Unit: 3731

The inner flange (at distal end of 10) has a plurality of lateral notches 90, 68a-c, 68a'-c' extending in the circumferential direction, and each said pair of vertical notches extend toward the cylindrical wall from both ends of each lateral notch and the circular end portion has a plurality of lateral notches extending in the circumferential direction between the inner flange and the cylindrical wall, and each said pair of vertical notches 90, 68a-c, 68a'-c' extend toward the cylindrical wall from both ends of each lateral notch (Figure 1).

Chu also discloses the corresponding portion (in between 68a-c and 90, and 90 and 68a'-c') having a flange provided so as to inwardly protrude from the cylindrical wall, the engagement piece (adjacent 90, 68a-c, 68a'-c') having separation portions separated from each other by a notch portion formed in the inner flange, and the snare wire is supported between the flange and the separation portions (Figure 1).

Chu discloses the engagement pieces and the corresponding portions in between 68a-c and 90, and 90 and 68a'-c') being alternately arranged in the circumferential direction of the circular end portion (Figure 1).

Page 6

Application/Control Number: 10/724,812

Art Unit: 3731

It would have been obvious to one of ordinary skill in the art at the time of invention to provide a plurality of engagement pieces and corresponding portions, as taught by Chu, to Ishikawa in order to further ensure prevention of disengagement of the snare from the endoscope when conducting surgery.

Claims 2, 7-8, and 17: Ishikawa and Chu disclose the claimed device except for the engagement piece and the corresponding portion each elastically holding the snare wire therebetween, the engagement piece being able to swivel or bend to a side where the circular end portion is positioned with respect to the corresponding portion and the engagement piece holding the snare wire between its outer surface and one surface of the corresponding portion when caused to swivel and the snare wire being pressed against the corresponding portion by an elastic return force of the engagement piece. However, it would have been obvious to one of ordinary skill in the art at the time of invention to provide an engagement piece and corresponding portion that elastically hold the snare wire therebetween and the engagement pieces and corresponding portions being able to swivel, depending on the material used to form the cap, such as an elastic, flexible polymer material well known in the art, since it was known in the art that flexible polymeric materials used in endoscopic caps are biocompatible and allow for greater movement and manipulation of snare wires.

Application/Control Number: 10/724,812
Art Unit: 3731

4. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishikawa (U.S. Patent No. 6,306,081) in view of Chu (U.S. Patent No. 5,968,056), as applied to claim 1 above, and further in view of Smith (U.S. Patent No. 6,517,539).
Claim 11: Ishikawa and Chu disclose the claimed device, including a snare sheath 16 into which the snare wire is inserted, a flexible tube 5 which has an opening on an end side (Ishikawa, Figures 5-6), except for a fixture for fixing the snare sheath.

Smith teaches a fixture 354 for fixing the snare sheath being disposed around the snare sheath to inwardly press an outer peripheral surface of the snare sheath to fix the snare sheath and for preventing the snare sheath from moving in an axial direction of the snare sheath against the flexible tube (Figure 10; col. 7, lines 10-27). It would have been obvious to one of ordinary skill in the art at the time of invention to provide a fixture to prevent axial movement of the snare sheath against the flexible tube, as taught by Smith, to Ishikawa and Chu in order to allow the snare to move relative of the sheath.

Response to Arguments

 Applicant's arguments with respect to claims 1-11, 13-15, 17 have been considered but are moot in view of the new ground(s) of rejection. Art Unit: 3731

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to DIANE YABUT whose telephone number is (571)272-

6831. The examiner can normally be reached on M-F: 9AM-4PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Todd Manahan can be reached on (571) 272-4713. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
